Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This record contains 84 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will 65 764: 984 Contig of 692 bp in length 1457 1556: 9ap of 100 bp 1557 2235: contig of 692 bp in length 1558: 9ap of 100 bp 1557 2235 2335: contig of 679 bp in length 2236 2335: gap of 100 bp 2336 3302: contig of 667 bp in length 303 3102: 9ap of 100 bp 3103: 9ap of 100 bp 3789: contig of 687 bp in length 3790 3889: gap of 100 bp 4694 653: contig of 685 bp in length 6594 653: contig of 685 bp in length 6594 657: contig of 689 bp in length 6588 657: contig of 689 bp in length 6588 657: gap of 100 bp 658 6942: contig of 659 bp in length 658 6542: contig of 659 bp in length 658 7711: contig of 659 bp in length 7712 7811: gap of 100 bp 7712 7811: gap of 100 bp 7712 7811: gap of 100 bp 70 10169: gap of 100 bp 10 length 106 10845: contig of 676 bp in length 16 10845: gap of 100 bp 100 bp 10 length 13 11732: gap of 100 bp 100 b 100 bp f 697 bp in length 664: contig of 664 bp in length 100 bp f 684 bp in length contig of contig of 2 7811: gap of 8 8488: cont 9 8588: gap of 9 9285: cont 9385: gap of 10069: cor be preserved. 8489 8589 9286 9386 10070 10170 10846 10946 11633

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacla), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Scares and M. Patima Bonaldo. "

/note="Organ: eye; Vector: lambda gt10; Site_1: EcoRI;
Site_2: EcoRI; The library used for sequencing was a sublibrary derived from a human retina cDNA library.
Inserts from retina cDNA library DNA were isolated, randomly primed, PCR amplified, size-selected, and cloned into lambda gt10. Individual plaques were arrayed and used as templates for PCR amplification, and these PCR products were used for sequencing."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Rice is the most important food crop in the world. Half of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.
Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa.
Nipponbare variety using EcoRI as the cloning enzyme. The library contains 55,266 clones with an average insert size of 121 Kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

                                                                                                                                                                                                                                                                                                                                                           /note="Organism pooled; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not 1; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHil9W, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento

On Mar 6, 2000 this sequence version replaced gi:7009540.

IMPORTANT: This sequence is unfinished and does not necessarily
represent the correct sequence. Work on the sequence is in
progress and the release of this data is based on the understanding
that the sequence may change as work continues. The sequence may
be contaminated with foreign sequence from E.coli, yeast, vector,
phage etc. Order of segments is not known; 800 n's separate

* NOTE: This is a 'working draft' sequence. It currently
consists of 28 contigs. The true order of the piecess
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the axact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will

* be preserved.

Gehrig,A., Felbor,U., Kelsell,R., Hunt,D.M., Maumenee-Hussels,I.E. and Weber,B.H.F.

Assessment of a novel interphotoreceptor matrix gene (IPM150)

localized to 6q14.2-q15 in autosomal dominant Stargardt-like macular dystrophy, progressive bifocal chorioretinal atrophy (PBCRA), and North Carolina macular dystrophy (MCDRI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Genomic organization and chromosomal localization of the interphotoreceptor matrix proteoglycan-1 (IMPG1) gene: a candidate for 6q-1inked retinopathies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                J. The present sequence encodes a protein designated H218. The H218 polypeptide is a member of the G-protein coupled receptor superfamily. The H318 polypeptide is involved in cell proliferation and differentiation, and in disease states such as cancer. The

                                                                                The human RAD50 (hRAD50) is involved in DNA repair and has tumour suppression activity, can be used to detect predisposition to, decrease suppression activity, can be used to detect predisposition to, decrease the risk of or treat cancers, e.g. acute myeloid leukaemia, myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related acute myeloid leukaemia, refractory anaemia or refractory anaemia with excess blasts. Also disclosed in this invention is Human Septin-2 homologues of which may be used as targets for cancer therapies and central nervous system directed treatment methods, and to measure the proliferative potential of selected cell types.

Cauble-stranded DNA) which comprises one of the 7837 "GS" sequences given in 179001-175837 and which is able to hybridise to part of former in 179001-175837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-contranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for sequence 355 BP; 109 A; 60 C; 64 G; 118 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                    predisposition to, decrease risk of and treat cancer, also Septin-2

Claim 27; Page 39-40; Bipp; English.
CC The present sequence, clone 20DD (ATCC 69704), encodes a tumour necrosis
CC factor (TNF) receptor 1 (R1) death domain (DD) ligand (see R95728). A
cyeast genetic selection method, the "interaction trap", was used to
correct this receptor 1 (R1) death domain (DD) ligand (see R95728). A
cyeast genetic selection method, the "interaction trap", was used to
corf the P55 type 1 TNF-R. The protein (895238) encoded by clone 20DD is
clone 20DD and in the protein (189528) encoded by clone 20DD is
clone 20DD and IGFBP-5, IGFBP-5 and certain fragments of it will exhibit
cord. Clone 20DD and in the prevention and treatment of anti-inflammatory
conditions and other conditions such as cachesta, autoimmune disease,

Claim 27: Page 42-43; 103pp; English.

This sequence represents the coding sequence of the invention. This sequence was isolated from clone 20DD and encodes a tumour necrosis and cartor receptor P55 type (TNF-R1) death domain (DD) ligand protein. A chost cell containing this sequence is used for the recombinant production of TNF-R1-DD. The TNF-R1-DD ligand protein can be used in a method to identify inhibitors of TNF-R DD binding. The TNF-R1-DD ligand protein, insulin-like growth factor binding protein-5 (IGFBP-5, has TNF-R1-DD ligand activity) or inhibitors of TNF-R1-DD ligand protein are capable of preventing or ameliorating an inflammatory condition, preferably by inhibiting TNF-R DD binding. Identification and isolation of ligands inhibiting TNF-R DD binding. Itentification and isolation of ligands therefore a silows their effects upon TNF-R signal transduction and use as therefore agained.

Examined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19-MAR-1998 (first entry)

py ovary, pituitary, retina and colon cDNA libraries
Claim 1: Page 382; 633pp; English.

This sequence represents an expressed sequence tag (EST), and is a
color cereted EST sequences isolated from a variety of human tissue
cources. The EST sequences and proteins encoded by them are predicted to
have useful biological activities which would make them suitable for
treating, preventing or ameliorating medical conditions in humans and
animals, although no supporting data is given. Suggested activities
include nutritional activity, immune stimulating or suppressing activity,
heematopoiesis regulating activity, tissue growth activity, haemostatic
activity, andhough no supporting activity, tissue growth activity, activity, receptor/ligand activity, tumour inhibition
activity, cadherin/tumour invasion suppressor activity, tumour inhibition
activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                      EST clone B141.

Est clone B141.

Est clone B141.

Est clone B141.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding insulin-like growth factor binding protein - useful for treating breast and bone cancer and modulating bone growth Claim 3; Page 11; 42pp; English.
This sequence encodes human insulin-like growth factor binding protein. The insert from Q28270 was excised and subsequently used as a probe to screen a human placenta cDNA library. Positive clones were prepared, purified, and one of the longest clones subcloned into pBluescript SK+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09-DEC-1996 (first entry)
Insulin-like growth factor binding protein-5 (IGFBP-5) cDNA.
Insulin-like growth factor becaptor 1 death domain; inhibitor;
TNR-RI-DD; tumnour necrosis factor receptor 1 death domain; inhibitor;
P55; anti-inflammatory; autoimmune disease; graft versus host reaction; osteoporosis; cachexia; diabetes; sequence identity; IGFBP-5; insulin-like growth factor binding protein-5; ds.

CC The present sequence encodes insulin-like growth factor binding protein-5 (CC R95329) and a tumour necrosis factor (TNF) receptor 1 (R1) death domain CC (DD) ligand (Colone 200D; R95328) it has been determined that IGFBP-5 and CC train fragments of it, will exhibit TNF-R1-DD ligand binding activity.
CC A yeast genetic selection method, the "interaction trap", was used to CC screen Mi38 cell cDNA libraries for proteins that interact with the DD of the P55 type 1 TNF-R. TNF-R1-DD ligands and their inhibitors, e.g.
CC offens.
CC GFRBP-5, are useful in the prevention and treatment of anti-inflammatory CC conditions and other conditions such as cachexia, autoimmune disease, CC graft versus host reaction, osteoporosis, diabetes, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               conditions
Claim 27; Page 44-45; 103pp; English.

This squence represents the coding sequence of the invention. This This squence encodes the insulin-like growth factor binding protein-5 captures a squence encodes the insulin-like growth factor binding protein-5 squence encodes the insulin-like growth factor receptor P55 type (INF-R1) captured domain (DD) ligand protein. A host cell containing this sequence is used for the recombinant production of INF-R1-DD. The INF-R1-DD ligand protein can be used in a method to identify inhibitors of TNF-R1-DD ligand protein are espable of activity), or inhibitors of TNF-R1-DD ligand protein are capable of preventing or ameliorating an inflammatory condition, preferably by inhibiting TNF-R DD binding. Identification and isolation of ligands allows their effects upon TNF-R signal transduction and use as therapeutic agents for treatment of TNF-Induced conditions to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           įs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TWF-RI-DD ligand protein clone IGFBP-5 coding sequence.

Truncated insulin-like growth factor binding protein - has reduced affinity for insulin-like growth factor, useful for steaulating bone cell growth and mitogenic activity

C This sequence is contained in plasmid pBsBP6-1A and encodes 2

C preferred truncated IGFBP-5 proteins derived from human U-2

C osteosarcoma cells. This sequence may be optionally fused to a calcitonin gene for expression in a recombinant host, preferably yeast or CHO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bacterial transferrin receptor operon (H. influenzae strain SB33).
Thpl: Thp2: transferrin receptor operon; vaccine; antigen;
non-typable strain; Haemophilus influenzae; meningitis; ss.
Haemophilus influenzae strain SB33.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hypopitulitatism, osteoporosis, anaemia(s), cancer, etc., stimulating growth and wound healing, also useful in diagnosis claim 8 Fig1 1, 65pp; English.

CR was used to isolate insulin-like growth factor binding protein 6 (IGFBP6) from a human osteosarcoma cDNA template using PCR primers whose sequences were based on regions of high homology between the amino acid sequences of five known IGFBPs.

Two probes were synthesised, based on the sequence of the PCR prod. and were used to screen a ZAPII/human osteosarcoma cDNA library.

Two probes were synthesised, based on the sequence of the PCR prod. and were used to screen a ZAPII/human osteosarcoma cDNA library.

Two probes were synthesised, based on the sequence of the PCR prod. and were double positive clones were found and were analysed by restriction digestion. A unique sequence of ca. 1.7 kb designated IGFBP6 was identified. IGFBP6 may be used alone, or with IGF to stimulate growth, tissue or organ regeneration or wound healing. Also IGFBP6 has applications in the treatment and diagnosis of hypopitulitarism, osteoporosis, anaemias, and disorders due to excessive prodn. of free IGF, e.g. breast or kidney cancer, the binding protein can also be used too purify IGF e.g. by affinity chromatography.
